PROFILE

Aspiring DevOps Engineer specializing in Cloud-Native infrastructure and GitOps methodologies. Experienced in architecting resilient microservices and automating deployments using Kubernetes, ArgoCD, and Oracle Cloud (OCI). I leverage the ELK stack and Prometheus to build high-observability systems. Seeking a DevOps or SRE internship to apply hands-on experience in automated operations and cloud environments.

PROJECT EXPERIENCE

ft_transcendence – Cloud-Native GitOps Platform *2024 – 2026*

Tech: Oracle Cloud (OCI), Kubernetes (K3d), ArgoCD, Helm, SOPS, GitHub Actions, Traefik, ELK Stack

- Architected and deployed a microservices backend to a K3d Kubernetes cluster hosted on **Oracle Cloud (OCI)**, utilizing Helm for dynamic templating and resource management.
- Implemented a fully automated **GitOps continuous deployment pipeline using ArgoCD**, ensuring zero-drift synchronization between the Git repository and cluster state.
- Established a CI pipeline via **GitHub Actions** to automatically build Docker images and push them securely to the GitHub Container Registry (GHCR).
- Secured infrastructure by encrypting sensitive cluster secrets and SSL certificates using **SOPS**, injecting them safely into the automated deployment workflow.
- Configured **Traefik Ingress** for secure traffic routing alongside an observability suite utilizing the **ELK Stack** and **Grafana** for real-time system monitoring.

ft_irc – Internet Relay Chat Server *2024*

Tech: C++, TCP/IP, Socket Programming, Poll/Select, Network Protocols

- Developed a fully functional IRC server from scratch in C++ using non-blocking I/O and sockets.
- Implemented the TCP/IP stack logic to handle multiple concurrent client connections via `poll()`.
- Managed complex network states and buffered data transmission to ensure reliable communication.

Inception – Scalable Docker Infrastructure *2023*

Tech: Docker, Docker Compose, Nginx, MariaDB, WordPress, Debian

- Built a strictly containerized infrastructure from scratch on Debian using security best practices.
- Developed optimized Dockerfiles and established secure private networking between isolated services.
- Configured persistent storage and automated environment setup to ensure 100% reproducibility.

TECHNICAL SKILLS

Cloud & Orchestration: Oracle Cloud (OCI), Kubernetes (K3s/K3d), ArgoCD (GitOps), Docker, Helm
Security & Routing: SOPS, Traefik Ingress, Nginx, SSL/TLS
Observability: ELK Stack (Elasticsearch, Logstash, Kibana), Grafana, Prometheus, Alertmanager
CI/CD & Automation: GitHub Actions, GitHub Container Registry (GHCR), Bash Scripting
Networking & Protocols: TCP/IP, Socket Programming, Load Balancing
Languages: Go, Python, C, C++, SQL

EDUCATION

1337 Coding School (UM6P) – 42 Network **2023 – Present**

Software Engineering Program (Common Core Completed)

Project-based engineering school focused on peer-learning and self-directed mastery.

LANGUAGES

Arabic – Native | **English** – Intermediate (Technical Reading & Communication) | **French** – Intermediate
